

DERIVATIVES ROLLOVER ANALYSIS

30-07-2021

AUGUST SERIES VIEW

In the July series, the domestic market index Nifty hits an all-time high of 15962 supported by a decent start of Q1FY22 earnings, positive global cues, falling new COVID cases, and rising vaccination rates. However, the index failed to cross the psychological barrier of 16000 levels due to rising delta variant cases. Traders remained cautious in the expiry week and preferred to book profits due to China's regulatory issues and global market weakness. Finally, Nifty fell by 12 points (EoE) during the July series and settled on flat note at 15778 indicating neutral to positive bias for the short term. Thus, investors should remain cautious on the higher side. On the expiry day, the Nifty futures rollover stood at 83%, which is higher as compared with the last three series average rollover of 76%. Nifty will start the August series with an open interest of 0.95 Cr shares compared with an OI of 0.97 Cr shares at the beginning of the July series. Market-wide rollovers stood higher at 92% compared with the average rollovers of 90% in the last three series. Going into August month, a new variant of Covid-19 cases, progress of the vaccine drive, monthly auto sales data, and Rupee movement against the Dollar, Bond yield movement, Fiis flow, Q1FY22 Results, progress of monsoon, RBI monetary policy, global cues, and crude oil price movement will dictate the trend on the bourses next month.

DERIVATIVES INDICATORS

During the month, India VIX cool off by 14.27% (EoE) and closed at 12.95% vs. 15.10% of the previous month, lower volatility indicates an overall bullish market bias, but a small bounce in VIX can offer some volatile cues to the market. Another leading derivatives indicator, Nifty PCR, opened on a lower note this month at 1.04 against last month's 1.20.

BANKNIFTY

The index saw high rolls of 81% compared with the 3M average of 76%. BankNifty will start the August series with an OI of 2.02Mn shares compared with OI of 1.90 Mn shares at the beginning of the July series. As per options data, support for the index is around 34000 and 32000 whereas resistance stands at 37000 and 38000 for the short term.

This indicates 16000 and 16500 levels will act as the resistance zone on the upside for the short term. On the put options front, Maximum open Interest is at strike prices of 15500 and 15000 (with nearly, 21.23 lacs and 26.62 lacs shares outstanding respectively) indicating these levels will be stronger support zone on the downside.
